Proceedings of the Conference on Computational Physics 2006

CCP 2006

Gyeongju, Republic of Korea

August 29–September 1, 2006

Editors: Jai Sam Kim and Jae Koo Lee

J.S. Kim and J.K. Lee

Preface

xi

CCP2006 Committees

Section 1. Condensed Matter and Nanophysics

1.1. Plenary Talk

J.R. Chelikowsky, M.L. Tiago, Y. Saad and Y. Zhou

Algorithms for the evolution of electronic properties in nanocrystals

1

1.2. Algorithms and Modeling

J. Hafner

Feature article—Materials simulations using VASP—a quantum perspective to materials science

6

M.J. Gillan, D.R. Bowler, A.S. Torralba and T. Miyazaki

Feature article—Order- N first-principles calculations with the CONQUEST code

14

J. Adler, J. Fox, R. Kalish, T. Mutat, A. Sorkin and E. Warszarski

The essential role of visualization for modeling nanotubes and nanodiamond

19

1.3. Computational Biophysics

A. Kranjc, C. Anselmi, P. Carloni and F.E. Blaney

Structural models of human big conductance calcium- and voltage-gated potassium channels

21

F.L. Gervasio

Charge transfer mechanism in a PolydGpdCp fiber and in wet DNA

27

1.4. Computational Materials Science

- Y.-J. Kang, J. Kang, Y.-H. Kim and K.J. Chang
First-principles approach to the electron transport and applications for devices based on carbon nanotubes and ultrathin oxides 30
- A.Yu. Kuksin, G.E. Norman, V.V. Stegailov and A.V. Yanilkin
Surface melting of superheated crystals. Atomistic simulation study 34
- Y.-K. Choe, E. Tsuchida and T. Ikeshoji
Electrical property of a sulfuric acid–water mixture from the first-principles molecular dynamics simulation 38

1.5. Posters

- S.-A. Ahn and M.W. Cho
Exact and fast calculation for two-dimensional correlated electron systems: application to the Hubbard model 40
- T.T. Bazhiron, G.E. Norman and V.V. Stegailov
Cavitation in liquid Pb and Li under negative pressures 41
- Y.-S. Kim
Asymmetric-dimer–symmetric-dimer mixed phase on tensile-strained Si(001) surface 42
- Y. Kubota and K. Nobusada
An efficient numerical method for exciton states in quantum boxes 43
- G. Lee and J.S. Kim
Adsorption energies of Al, Ga, In, Tl on Si(111)- 7×7 44
- J.K. Nilsen
Python in scientific computing: Applications to Bose–Einstein condensates 45
- Y. Park, R.J.W.E. Lahaye and Y.H. Lee
Adsorption of Pt on defective carbon nanotube walls: a DFT approach 46
- K. Shiratori and K. Nobusada
Electronic structure calculations at constant chemical potential toward the application to electrochemistry 47
- A. Kuksin, G. Norman, V. Stegailov and A. Yanilkin
Atomistic simulations of structure transitions and fracture in Fe and Al single crystals 48
- Y. Yun, S.C. Kwon and W.W. Kim
Ab initio study of planar faults in bcc Fe and Mo 49
- O. Efimov, Y.-G. Yoon and S.-H. Jhi
Carcinogenic activity of polycyclic aromatic hydrocarbons in first-principles 50
- K. Hayashi, N. Omote and D. Tanaka
Molecular dynamics study of atomistic mechanisms of wearless friction determining threshold sliding velocity 51
- G. Lee, J. Jeong and Y.-G. Yoon
Comparison of trajectory based methods to find transition states 52
- K. Nobusada and K. Yabana
Electric currents in ring-shaped molecules induced by circularly polarized laser pulses 54

Section 2. Plasma Physics

2.1. Plenary Talk

- A. Bécoulet, P. Strand, H. Wilson, M. Romanelli, L.-G. Eriksson, The contributors to the European Task Force on Integrated Modelling Activity
The way towards thermonuclear fusion simulators 55

2.2. Computational Plasmas, Overall

- E. Lefebvre, E. d'Humières, L. Gremillet, S. Fritzler and V. Malka
Numerical modeling and applications of laser-accelerated ion beams 60
- T. Makabe, T. Shimada and T. Yagisawa
Plasma etching and feature evolution of organic low- k material by using VicAddress 64
- M.S. Hur and H. Suk
New envelope-kinetic scheme for the simulation of Raman backward laser amplification 68
- S.S. Kim and S.W. Yoon
Transport simulations for the scrape-off layer and divertor plasmas in KSTAR tokamak 70

2.3. Computations in Low-Temperature Plasmas

- F. Iza and J.K. Lee
Low-pressure plasma generation inside slender tubes 72
- X.-W. Hu, Z.-H. Jiang, S. Zhang and M. Liu
The propagation of a microwave in an atmospheric pressure plasma layer: one- and two-dimensional numerical solutions 76
- F. Rogier, J.-C. Mateo-Velez and G. Quinio
Numerical modeling of DC discharges in air flows 78

2.4. Particle Simulations and Others

- S. Kuhn, D.D. Tskhakaya and D. Tskhakaya (jr.)
The magnetized plasma-wall transition (PWT) and its relation to fluid boundary conditions 80
- Y. Miyagawa, M. Ikeyama, S. Miyagawa, M. Tanaka and H. Nakadate
Plasma analysis for the plasma immersion ion implantation processing by a PIC-MCC simulation 84
- M.M. Turner and P. Chabert
Modelling of dual-frequency capacitive discharges 88
- J. Yoo, T. Rhee and C.-M. Ryu
1D PIC simulation study of nonlinear beam plasma interaction 93

2.5. Parallel Particle Simulations

- V.K. Decyk
UPIC: A framework for massively parallel particle-in-cell codes 95
- J.-S. Wu, K.-H. Hsu, F.-L. Li, C.-T. Hung and S.-Y. Jou
Development of a parallelized 3D electrostatic PIC-FEM code and its applications 98
- S. Longo
Kinetic simulation of neutral and weakly ionized gases 102
- H.J. Lee, H.J. Yoon and J.K. Lee
Simulation of photons from plasmas for the applications to display devices 106
- S. Hamaguchi, M. Yamashiro and H. Yamada
Atomic-level simulation of non-equilibrium surface chemical reactions under plasma-wall interaction 108

2.6. Miscellaneous Subjects

- K. Ostrikov, I. Levchenko and S. Xu
Computational plasma nanoscience: Where plasma physics meets surface science 110
- S.W. Chau, K.L. Hsu, D.L. Lin, J.S. Chen and C.C. Tzeng
Modeling and experimental validation of a 1.2 MW DC transferred well-type plasma torch 114

H.C. Kim and J.P. Verboncoeur Reflection, absorption and transmission of TE electromagnetic waves propagation in a nonuniform plasma slab	118
Y.J. Hong, H.S. Ko, G.Y. Park and J.K. Lee Kinetic plasma simulations for three dielectric etchers	122
2.7. Posters	
H. Abbasi, M. Ghadimi, M. Jenab and N. Javaheri Vlasov model using kinetic phase point trajectories for the study of BGK modes	124
D. Kim, H. Chang and C.-M. Ryu Particle simulation of a magnetized dual-frequency capacitively coupled plasma	125
S. Choi, S. Lee, J. Lee, K. Kim and G. Yeom Two-dimensional fluid simulation of large-area plasma source with parallel resonance antenna	126
T.H. Chung and Y.M. Shin Theoretical model of cylindrical Langmuir probe for low-pressure electronegative discharges	127
Y.J. Hong, G.J. Kim, S.H. Lee and M. Yoon Comparison between particle-in-cell Monte-Carlo and fluid simulations of argon microhollow discharges	128
J. Kang, G. Park and J. Lee Particle-in-Cell/Monte Carlo simulation of CF ₄ discharge in capacitively coupled plasma reactor	129
G.J. Kim, Y.J. Hong, F. Iza and J.K. Lee Evolution of the electron energy distribution function in pulsed micro hollow cathode discharge	131
S.M. Lee, Y.S. Seo and J.K. Lee Paschen breakdown curve by one-dimensional PIC-MCC simulation	132
S. Lee, S. Choi and J. Shon Two-dimensional fluid simulation of VHF-ICP source with parallel resonance antenna	133
Y.-S. Na and J.Y. Kim Predictive modelling of advanced tokamak scenarios	134
Y.S. Seo, S.M. Lee and J.K. Lee Improvement of luminous efficiency in a mercury-free flat fluorescent lamp (FFL) by using fluid simulation	135
S.H. Shin, D.Y. Jeong, J.E. Han and M. Yoon A tunable coherent IR radiation source based on a self-amplified spontaneous emission free-electron laser	136
J. Šimek, R. Hrach and P. Jelinek Computational study of negative ions influence on plasma sheath formation	137
C.-T. Hung, M.-H. Hu, J.-S. Wu and F.-N. Hwang A new paradigm for solving plasma fluid modeling equations	138
Section 3. Statistical Physics	
3.1. Plenary Talk	
K. Binder, J. Horbach, A. Milchev, M. Müller and R. Vink Monte Carlo simulations of phase transitions of systems in nanoscopic confinement	140
3.2. Polymers	
J.P. Wittmer, P. Beckrich, F. Crevel, C.C. Huang, A. Cavallo, T. Kreer and H. Meyer Are polymer melts “ideal”?	146

E. Luijten and A. Cacciuto Translocation of polymers out of confined geometries	150
3.3. Particles and Fluids	
P. Schapotschnikow, R. Pool and T.J.H. Vlugt Selective adsorption of alkyl thiols on gold in different geometries	154
H.J. Herrmann, J.S. Andrade Jr. and A.D. Araújo Particles in fluids	158
A. Nakayama, K. Hasebe and Y. Sugiyama Instability of pedestrian flow in 2D optimal velocity model with attractive interaction	162
S. Taniguchi, M. Nakamura, M. Isobe, N. Zhao and M. Sugiyama Heat conduction problem in a one-dimensional hard-point gas: Molecular dynamics and extended thermodynamics	164
S. Wessel Simulations of atomic gases on frustrated optical lattices	166
3.4. Computational Biophysics	
F. Schmid, D. Dücks, O. Lenz and B. West A generic model for lipid monolayers, bilayers, and membranes	168
F.L.H. Brown Simple models for biomembrane structure and dynamics	172
M. Li and Z.-C. Ou-Yang DNA as active polymer: long-range allosteric effect and chromatin loop structure	176
3.5. Network Theory	
J. Marro, J.J. Torres and J.M. Cortés Networks with heterogeneously weighted connections and partial synchronization of nodes	180
K. Kim, S.Y. Kim and D.-H. Ha Characteristics of networks in financial markets	184
3.6. Posters	
K.E. Lee, J.W. Lee and B.H. Hong Complex networks in a stock market	186
G. Lim, S.Y. Kim, J.-H. Kang and K. Kim Dynamical models of high-frequency data analysis	187
G. Nam and N.-K. Lee Kinetics of a semiflexible chain under tension	188
Y. Sakaniwa and H. Shima Numerical study on critical exponents of hyperbolic Ising lattice	189
T. Tatekawa Phase transition in d -dimensional long-range interacting systems	190
Section 4. Computational Physics Education and Miscellaneous Fields	
4.1. Computational Physics Education	
R.H. Landau Computational Physics Education; why, what and how	191

K.-C. Lee and J. Lee Programming physics softwares in Flash	195
P.H. Borchers Python: a language for computational physics	199
4.2. Miscellaneous Subjects	
P. Vashishta, R.K. Kalia and A. Nakano Multimillion atom simulations of dynamics of wing cracks and nanoscale damage in glass, and hypervelocity impact damage in ceramics	202
R.Y. Yang, R.P. Zou, K.J. Dong, X.Z. An and A. Yu Simulation of the packing of cohesive particles	206
Y. Chen, X. Chen and Y. Deng Simulating botulinum neurotoxin with constant pH molecular dynamics in Generalized Born implicit solvent	210
4.3. Posters	
J. An, S. Ahn, S. Kim and J. Lee The design of the application and service platform for grid pilot services	214
J. Hahm, O.-K. Kwon, H.J. Myung, H. Park and J.R. Lee KMI-R1: A Grid middleware package for K*Grid	215
H.J. Kim and J.S.R. Lee A study on a data dissemination mechanism for Grid environment	216
J.-H. Kwak, S. Kim, Y.C. Hwang and P. Lee Development of web-based Grid service platform for K*Grid infrastructure	217
D. Lee, J. Lee and Y.-G. Yoon A quadratic string adapted barrier exploring method for locating transition states	218
Section 5. Particle Physics and Nuclear Physics	
J. Shiers Plenary Talk —The Worldwide LHC Computing Grid (worldwide LCG)	219
H.B. Newman Networking for High Energy and Nuclear Physics	224
S. McKee The ATLAS computing model: status, plans and future possibilities	231
I. Sfiligoi CDF computing	235
H. Sakamoto Data grid deployment for high energy physics in Japan	239
D. Son and J.-S. Suh HEP computing in Korea	243
K. Cho Cyberinfrastructure in Korea	247
N. Attig, N. Cundy, S. Krieg and T. Lippert Simulation of full QCD using overlap fermions	249

Section 6. Numerical Astrophysics

C.F. Gammie, S. Noble and P.K. Leung Numerical models of black hole accretion flows	250
S. Koide, K. Shibata and T. Kudoh General relativistic simulations of jet formation in Kerr black hole magnetosphere	254
J.M. Stone and T.A. Gardiner Recent progress in astrophysical MHD	257
H.M. Lee, E. Kim and I. Yoon Dynamical evolution of rotating stellar systems: Fokker–Planck and N -body	260
I. Ahn and H.M. Lee N -body simulations of the dynamical evolution of rotating star clusters in galactic tidal field	262
D. Pomarède, E. Audit, R. Teyssier and B. Thooris Visualization of large astrophysical simulations datasets	263
